Subject: heads up

Bill Muno mentioned the Sauget sites as a **possible** Superfund Division topic for this year's Region 5 end-of-year celebration video. I wanted to **give you a heads up** that Andy Anderson and MaryAnn LaFaire from the Region's Planning Network might **be contacting** you sometime in the next month to get more information about the site and ask for your **suggestions** for locals to interview or good places to videotape.

This time around, the video will focus on **five areas** along the waters outlining the Region, including East St. Louis/Wood River. At this morning's **planning meeting**, someone mentioned that Dead Creek, which they said is part of the Sauget sites, is an **important** Indian site, so you might be asked about this, as well.

Hopefully, this won't be too much work for you. **Andy and MaryAnn** may just ask you some questions, then later ask you to review any part of the **video script** that has to do with your site.

If you have any questions about this project, **please call me** at 3-9309 or stop by cube 6008. Thanks for your help.

Subject: heads up, part 2

Earlier today I either sent each of you a message or talked to you in person about a project you're working on possibly being in the end-of-year video. Just in case Andy and MaryAnn mention it when they talk to you, I wanted to explain that the first two of the five areas the video will focus on (Falls of Ohio/Louisville and East St. Louis/Wood River) are also being used for a separate video that the Region is producing as part of our obligation to do something for the Lewis and Clark 200th anniversary. (These two areas happen to be the first two important stops along the Lewis and Clark journey. We're lucky that the majority of the trip was in other regions.) When Andy and MaryAnn talk to you about your sites/projects for the end-of-year video, they may also mention the Lewis and Clark project, so I didn't want you to get confused. They're going to try to use a lot of the same footage for both projects, so the story line for the end-of-year video will mention Lewis and Clark and talk about four things for each area: 1) what it looked like 200 years ago when Lewis and Clark would have been there, 2) environmental/human health problems that have happened since then, 3) what EPA is doing to fix those problems, and 4) if possible, what EPA's trying to do to help the area be more sustainable in the future.

Hope I haven't just confused you more.

P.S. I forgot to ask: Do you have anything already written up that gives a summary of the Sauget sites (what the problems are, what's being done about them, etc.)? This could be a site summary sheet or something written for a weekly activity report. If you do, could you please send me a copy? If not, that's fine.
